Coastal Kids Ocean Adventure!

Sea Camp 2020

May 25th to July 31st

Each module introduces your camper to a group of marine or fresh water animals native to coastal Georgia. All ten of our three-hour modules have a classroom, field, and gallery/husbandry component. The focus is on fun. Campers play games, conduct experiments, collect animals for a good look under our creature cam, make junk jellies, dig up a mock sea turtle nest, beachcomb, feed our resident animals, and learn how to help a dolphin in distress. In Friday morning's Marsh Trip module, we trek around the marsh to explore its plants and creatures. Everything a coastal kid should know!

<table>
<thead>
<tr>
<th>Monday Morning Module 9:30 a.m. to 12:30 p.m.</th>
<th>Sea Turtles - Meet our loggerhead sea turtle and discover the importance of these endangered animals. Learn about their complex lifecycle, how to identify different species, and how Tybee Island protects their nesting mothers and hatchlings.</th>
<th>Dolphins - Dolphin are Georgia's only year-round marine mammal. Discover how local scientists are observing and protecting these lovable animals.</th>
<th>Fish - Investigate the different shapes and sizes of local fish through the scientific art form of fish printing, or gyotaku. Campers get hands-on while collecting live fish, using cast nets, hand nets, and seine nets.</th>
<th>Squid and Crabs - More than 95% of the planet's animal species lack a backbone. Investigate invertebrates through a guided squid dissection. Campers will observe these critters up-close, using our Flex Cam.</th>
<th>Marsh Trip - Get muddy and explore one of the most productive and diverse ecosystems on the planet through a guided trek of our salt marsh.</th>
</tr>

<tbody>
<tr>
<td>Afternoon Module 1 to 4 p.m.</td>
<td>Plankton - There are thousands of plankton in one drop of water! Campers collect and identify plankton under the microscope while understanding why some of the smallest organisms on the planet are the most vital.</td>
<td>Right Whales - The North Atlantic right whale is the most endangered whale on the planet. Campers will learn about their awesome adaptations and how the Georgia coast is a key part of their lifecycle.</td>
<td>Sharks - Replace fear with facts by learning about this apex predator, and their importance to the ocean's food web. Track live sharks, through an interactive activity. Campers will also search for and identify shark teeth found along the beach.</td>
<td>Sea Jellies - Although most sea jellies are made of 95% water, they still play an important role in our ecosystem. Discover their importance and how their adaptations have allowed them to thrive for over 500 million years.</td>
<td>Birds and Reptiles - Get a bird's eye view of these feathery and scaly creatures while observing local residents. Learn to identify between different species.</td>
</tr>
</tbody>
</table>
**Water Activities**

Sea campers do not go swimming, however, we do a lot of ankle-deep water activities, and older campers may participate in seine net activities in waist-deep water.

**What to Wear and Bring**

Sandsals and slip-on shoes work best. Bring a change of clothes, a bathing suit, towel, water bottle, sunscreen, and snack. If your camper is staying all day, bring their lunch. Please label all items with camper’s name.
